

Very great.

This lecturer did a great job and his examples were very interesting and kept the class engaged.  
Great job!

The lecturer did a great job keeping the class engaged and was very informative.

I thought his lecture was well paced.

He was a very engaging instructor, and explained his concepts very well. He made these hard subjects easier to digest.

Ben was very knowledgable about this topic and provided a very intriguing lesson that kept me and other students engaged throughout the entire lecture.

I thought it was really good. Great job including the class while also being informative. Terrific job for a young man who doesn't teach classes for a living (yet).

I like how he made quantum physics accessible- it was interesting and easy to follow!

I truly enjoyed his lecture. I was engaged and intrigued by the information that was presented. He would be a wonderful teacher.

He was a great lecturer with fun activities, and he taught really cool things in an interesting way.  
10/10!

Ben did a great job in his lecture but I would have liked to have the units displayed on the presentation when he was providing formulas.

Nice lecture. The content feels intimidating at first but your lecture made this really easy to understand. I liked the use of graphs and visual aids. This was very helpful for someone like me who is a little more of a visual learner.

I enjoyed his lecture. He explained the concept very well and made it understandable for me. His PowerPoint looked great as well. You definitely could tell that he knew what he was talking about.

bens lecture, was great he was well spoken and seemed very confident in his work. i really enjoyed this class

This lecture was a great way to close the semester. Not only was thisÂ  cool subject but Ben did a great job teaching. Through chemistry classes in high school and at Clemson, I was previously taught about emission and absorption lines, but it was not until Ben's description in this lecture that I got a real understanding of them and why light does that. He did awesome.

I liked learning about fluorescence and where it comes from

I was out of town for your lecture, but from the video I watched, I thought you were well spoken, had a good presentation theme, and included fun in the lecture.

He was very professional and knew a lot about the topic. He made me feel engaged in the material.

I thought you did a very great job explaining a complicated subject like quantum physics. I liked the demonstration but I could not see it very well from my seat so I would keep that in mind when lecturing!

I really enjoyed his lecture. He was always talking at a great speed, not too fast or too slow. I think that his slide show was also great for the information being presented and overall was a great lecture. I would 100% sign up for a lecture taught by him because I retained a lot of information taught by him that day.
